Dear Friends and Neighbors:

You may have seen the profile of Matt Smedal in the September 27 issue of The Weekly Packet. Matt is now a music director with 14 nationally toured theatre productions to his credit, but he grew up right here in Brooksville. Back in 2000, Matt was completing a Masters in Music Performance at West Virginia University and we were awarding our first scholarships – eight in all. One of them went to Matt. As with many others over the years, that scholarship has been a good investment.

This year, with your generous support, we have been able to award a record number of scholarships to Brooksville students - 27 in all, at the same base amount as last year -$2,500. In addition, we have distributed supplemental awards of $1,000 each to seven First Generation students.

Rather than our talking further about our students, we have decided this year to let them speak directly to you about their school experiences. Please read their letters; we think you will be glad you did. We are extremely proud to be able to help these students. Not only are they attending demanding schools, but they are also pursuing an incredible diversity of career paths, facing considerable academic and financial challenges, and telling tales of hard won personal growth along the way. Among them are future: teachers, engineers, mathematicians, architects, nurses and occupational therapists, psychologists, merchant marines, diplomats, social activists, entrepreneurs, artists, computer programmers, herbalists and dieticians. Collectively these young people are the best testimony one can imagine to the virtues of growing up in Brooksville and to the confidence to try new things that a close-knit, supportive community can instill in a child.

Once again, we remind you that at least half of our annual scholarship awards are supported by your donations to our annual appeal, with the balance being drawn from endowment. Each year we are humbled by the generosity of our neighbors in their financial support of our wonderful students. We hope that once again you pitch in with us to help sustain this tradition – making Brooksville the “town that went to school.”

With sincere thanks for your support,

Michael McMillen, Chairman

On behalf of the Trustees

Barbara Blake-Chapman, Robert Brown, Jr.,
Sarah Cox, Rayanne Kleiner, Cammie Fowler,
David Ludlow, Tonyia Peasley, Darene Powell,
Yvonne Redman, Kate Solter, Verena Stoll

STUDENT LETTERS:

This spring we received letters from 20 students requesting renewal of their scholarships – 27 pages of text in all. Having known many of these students as youngsters growing up in Brooksville, we find the variety of pursuits and experiences they write about especially heartwarming. They are now inspiring young adults, fully engaged with the world. We wish we could share with you all that they have written to us about their exploits, but space constraints have forced us to make selections, somewhat arbitrarily we must confess. If you know one of these young writers, reach out and let them know that you enjoyed hearing from them.

Julia Zephyr Martin,
Drexel University

I have been interested in drawing floor plans for as long as I can remember. Having grown up on a small town on the Maine Coast I find myself drawn to structures that are aesthetically pleasing but also functional and affordable. I have just finished my first year of architecture school at Drexel University’s Westphal College of Art and Design.

Our final project last semester was to design a boathouse for Philadelphia City Rowing, an afterschool program that gives middle school and high school students a part in the (competitive) rowing world. Despite having grown up around boats, I quickly realized that this was not going to be as easy as I imagined. This was our first project that required us to speak with real clients. We mapped out a site on the Schuylkill River and learned all about the historic Boathouse Row located there. It saddened me to discover that public access had now been lost there, as all the boathouses are now privately owned. Many diagrams, models and hand drafted drawings later we began exploring and building digitally… We concluded with a final presentation that I felt truly expressed our understanding of the infinite (possibilities of the) architectural world.

John Ludlow,
Washington & Lee University

While I am thoroughly enjoying Law School, the workload is at times enormously strenuous. At one point, during the first semester, I found that I “hit a wall.” Despite working at least 12 hours a day I was barely keeping up. I was exhausted and began to question if this path was right for me. I decided to take a day away from my studies, rest, and reflect. In the end, I put my head down and worked through the remainder of the fall semester. I have found that I have been better able to plan my time and have become a more efficient student during the Spring Semester, especially in my writing. I decided to stay at school during Spring Break to outline a large number of cases which will be a great help as I head into finals this Spring.

I have accepted a summer internship with the Maine Attorney’s Office in Augusta…I have requested to work with the Litigation and Natural Resources Divisions…This is a great opportunity to learn and make connections for the future.

Emma Weed,
Pomona College

During my first semesters at Pomona College I have gotten the opportunity to participate in multiple service-based clubs. In my role with Students for Sensible Drug Policy I managed community outreach and independently organized a drug education week open to 7 nearby colleges and the community… These efforts led to the creation and implementation of a new student drug policy centered toward healthy life habits, decrease of stigma and awareness of modern research. In Circle K we act as a “key Club” which devotes resources toward fundraising and community efforts. In Circle K I participated in… fundraising for a pediatric unit of a local hospital. We also collaborated with a local community residential center in buying and building bicycles for children there, painting apartments for residents, organizing clothing donation and distribution efforts and furnishing apartments for new residents.

Sage Shaheen,
Mount Allison University

This year I have mastered the art of studying and juggling multiple assignments and projects. As a result, my grades have improved and I have been able to become much more involved in my university and community. Most notably, I began volunteering for the Sackville Refugee Response Coalition, which brings families from the Middle East and Africa and settles them in Sackville. I have spent the year working with one of these families on their language skills. They have two young children and the parents are hardly older than myself. They speak English well enough to communicate but the children speak only Swahili. I am helping the father with improving his English. He and his wife are currently studying for their high school GEDs, something they were never able to do in Africa as they spent the past 12 years in a refugee camp.
Samantha Hutchinson, 
Eastern Maine Community College
The past school year wasn’t what I expected it to be. It was better. I made new friends my first year with great grades and experienced something that can only be once in a lifetime. After graduating from high school I was nervous about going to college, but after going I feel more comfortable and couldn’t imagine not going back…My current major is Hospitality and Tourism Management… I am excited to be part of the course and I’m excited for what is in store for me.

Hannah Van der Eb, 
Harvard University
This May I completed the second year of my master’s program in Landscape Architecture at the Harvard Graduate School of Design. I worked on two main studio projects focused on significant current issues with serious environmental and social impacts. The first project considered the influences of sea level rise on urban areas. My second project was research based and examined an abandoned US military base on the southern coast of Puerto Rico. These projects exemplify the roles landscape architects hold in solving problems facing us today.

Erik Bailey, 
Maine Maritime Academy
Though I am currently very far from home, I find myself thinking about the place and people who are my roots… Now that I’m on the final leg at Maine Maritime Academy, the future is feeling very close. This summer’s cruise has shown me how far I have come from when I was accepted at MMA. This cruise, I have been in command of the bridge and responsible for my watch standers. I have overtaken and been overtaken by ships in a dance of speed, distance, and momentum where mistakes weren’t an option. I have shot the stars with my sextant to fix our position within a nautical mile. Imagining my ten-year-old self, seeing what I am doing now, I can’t help think he would be utterly amazed to see what he will become.

Anna Ludlow, 
George Washington University
I’m currently a Sophomore at the Elliott School of International Affairs at The George Washington University in Washington, DC… One of the requirements of the Elliot School is a semester abroad. I have been accepted to attend Science Politique (Science Po) in Paris this Fall. I am very excited about this opportunity to deepen my understanding of French culture and language. Science Po is a leading university in International Affairs with a large population of international students and the faculty is excellent. I will be choosing classes later this spring. I intend to take at least one class taught in French in order to further support my fluency in the French language and hope to have plenty of time to explore Paris.

Claire Ciampa, 
Rice University
I’m doubling in psychology and math at Rice University. I enjoy learning about how the brain, mind, and body interact in my psychology classes and how to logically solve problems in my math classes. This summer I’m interning in two different psychology labs. One focuses on how stress impacts recently bereaved individuals, as these people are unfortunately much more likely to suffer from cardiovascular disease. The other lab studies memory and language impairments, especially in patients who suffered brain lesions as a result of strokes or traumatic injury. While psychology is an extremely broad field with my different sub-disciplines, I’m hoping to work in a quantitatively-oriented lab in order to put my math skills to use.

Nikki Jaffray RN, 
University of Maine at Fort Kent
I am currently a stay at home mom. I worked for three years with Union 93 as the School Nurse. I had my third daughter in October of 2016 and finished the 2016-17 school year. I plan on finishing my bachelor’s degree in Nursing and returning to work when my youngest daughter starts preschool.
2018 GRADUATES: Congratulations and best wishes to those of our students who finished programs this spring: Costas Tamu Christ, William Ludlow, and Philip Shaheen.

SCHOLARSHIP GRANTS FOR 2018-2019 ACADEMIC YEAR:
We wish our students the best of luck in school this year. We are proud of all of them for their ambition, vision, and plain hard work. We hope they have many experiences that prove useful in their lives and uplifting to their spirits.

ALUMNI PROFILE: WILL LUDLOW

Each year we provide space in our newsletter for one of our alumni to tell us about the role education has played in their life. This year we hear from Will Ludlow, who completed his undergraduate degree in Industrial Engineering this spring at Northeastern University. He now hopes to enter the field of data analytics.

To the Board Members and supporters of the Brooksville Education Foundation:

I am very pleased to report that I graduated from Northeastern University this past May. My degree is in Industrial Engineering and I have a minor in Business Administration. I chose to attend NEU due to its Boston location, and to take advantage of the co-op program.

I wanted to have an opportunity to experience city life. Boston, with 30 +/- colleges, is a young and vibrant city. Learning how to live and learn in a city has been a great experience and a large part of my education. I now feel like I could live anywhere.

While at NEU I was able to participate in the Co-op Program which places students in paid, full-time, professional positions for six months. NEU students can take up to three co-ops; I took two. My first was with Syska-Hennessey Group; a large consulting engineering company. I worked in their Cambridge office supporting projects in Boston and the office in Shanghai, China. I also worked directly with clients providing information and editing documents. I became particularly proficient in AutoCad. My second co-op was with Senior Aerospace in Sharon, MA. Senior Aerospace manufactures pneumatic and hydraulic control systems for aircraft manufacturers. My job at Senior was to map the manufacturing process and work directly with the manufacturing cells and senior management to streamline manufacturing and shorten the downtime between jobs, all to make the company more efficient. The co-op experience was fantastic and really helped me understand my interests and focus my career.

My Capstone Project, completed during my senior year was a transformative experience. My group and I worked with the Elliott Health Center in Boston to create a statistical model to improve their registration process in their Opioid Clinic. The clinic was having problems scheduling patients’ due to patient “no shows”. Elliott provided 130,000 patient records. We converted and “cleaned” this data to find the correlating factors that predict a patient’s likelihood of making or not making an appointment, and created a mathematical model to predict the likelihood of patients attending their opioid treatments. My group and I presented our model to senior staff at Elliott, which they have adopted and are now using.

I am currently looking to start my career with a focus on Data Science/Data Analytics; using statistics and calculus to create predictive modeling from big data sets. This field is huge and growing.

My five-year degree and cost of living in Boston were very expensive. The assistance I received from the Brooksville Education Foundation was so helpful to me and my family.

THANK YOU!

*Scholarships this year average $2,500 each unless noted. The majority have been awarded from the Maryann Snow Bates Scholarship Fund. Adrian Van der Eb, Anna Ludlow, Claire Ciampa, Hannah Van der Eb, and Sage Shaheen will receive scholarships from the Phyllis Ames Cox Scholarship Fund. The scholarships for Jasmine McDonald and Nikki Jaffray have been awarded from the Faye Austin Cosentino Scholarship Fund. Sara Clifford was awarded a $3,500 scholarship from the Isabel Grindle Condon Scholarship Fund. Michael Smith was awarded a scholarship from the Edwin & Evelyn Dyer Family Memorial Fund. Emma Crosby, Samantha Hutchinson, Nikki Jaffray, Hannah Peasley, Ethan Snow, and Michael Smith will receive additional $1,000 scholarships from the First Generation Fund, supplemented by donations from Our Lady of the Evergreen Chapel. Wesley Moores has been granted an additional $1,000 scholarship from the newly established Michael McMillen, Jr. Memorial Scholarship Fund.

* Reflects grant and scholarship awards approved by Trustees in July 2018 for December disbursement

Contributions to BAFF received since 12/23/08 have been held in cash equivalents to satisfy budgeted distributions.
Fund Balances of COND, PACS, FAYE, FGFS, BACF, and MIKE are invested in the Primary Investment Portfolio managed by the Maine Community Foundation.
The Michael McMillen, Jr. Memorial Scholarship Fund honors the life, kindness, and compassion of Michael N. McMillen, who died at the age of forty-six in December 2017. The son of Mike and Elizabeth McMillen, Mike was born in Boston and spent his childhood in Lamoine, Maine. He graduated from the Hyde School in Bath and from the University of Montana in Missoula, with a degree in psychology. While in Missoula, he was for two years the primary caregiver for a young man with ALS, a task he carried through until the young man’s death. Upon returning to Maine, Mike spent several years in Portland in the mental health care field. He also worked for several years in customer service and also as a painting contractor.

Mike loved the outdoors. He was an avid rock climber and fisherman and shared these enthusiasms with his friends and family. He was also extremely fond of dogs and always had one as a companion. Mike led a full life, with an extensive network of friends and family close at hand.

The immediate cause of Mike’s death was respiratory failure brought on by a lifelong affliction with asthma, complicated by recent heroin abuse. By making this information public and creating this Fund, Mike’s family hopes to continue the education, dialogue, and awareness of the extremely deadly opioid drugs so pervasive in our communities. They encourage other families to seek professional care for loved ones facing similar battles and all families to take with utter seriousness the spiritual, emotional and psychological nurturing of their children.

The Michael McMillen, Jr. Scholarship Fund provides scholarships to Brooksville residents pursuing post-secondary education, with a preference for those entering careers in the caring professions such as: medicine, social work, counseling, early childhood education, and eldercare. In 2018, the Fund made its first award to local student Wesley Moores, a senior at the University Of Maine, Orono. Wesley, pursuing a degree in electrical engineering, was chosen for this scholarship based on his continued strength and determination in pursuing a particularly challenging course of study. Donations may be mailed to the Michael McMillen, Jr. Memorial Scholarship Fund, Brooksville Education Foundation c/o the Maine Community Foundation, 245 Main St., Ellsworth, ME 04605.
